

# Ridge of High Pressure & Col

2/M John Jaromahum

# Ridge of high pressure

elongated area of relatively high atmospheric pressure, almost always associated with and most clearly identified as an area of maximum anticyclonic curvature of wind flow.

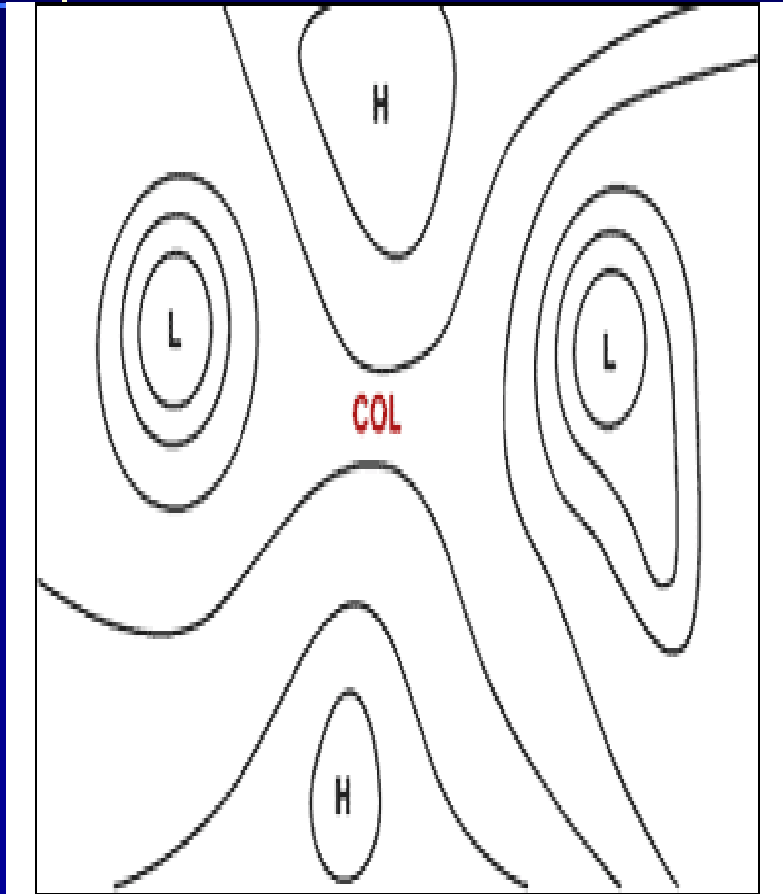

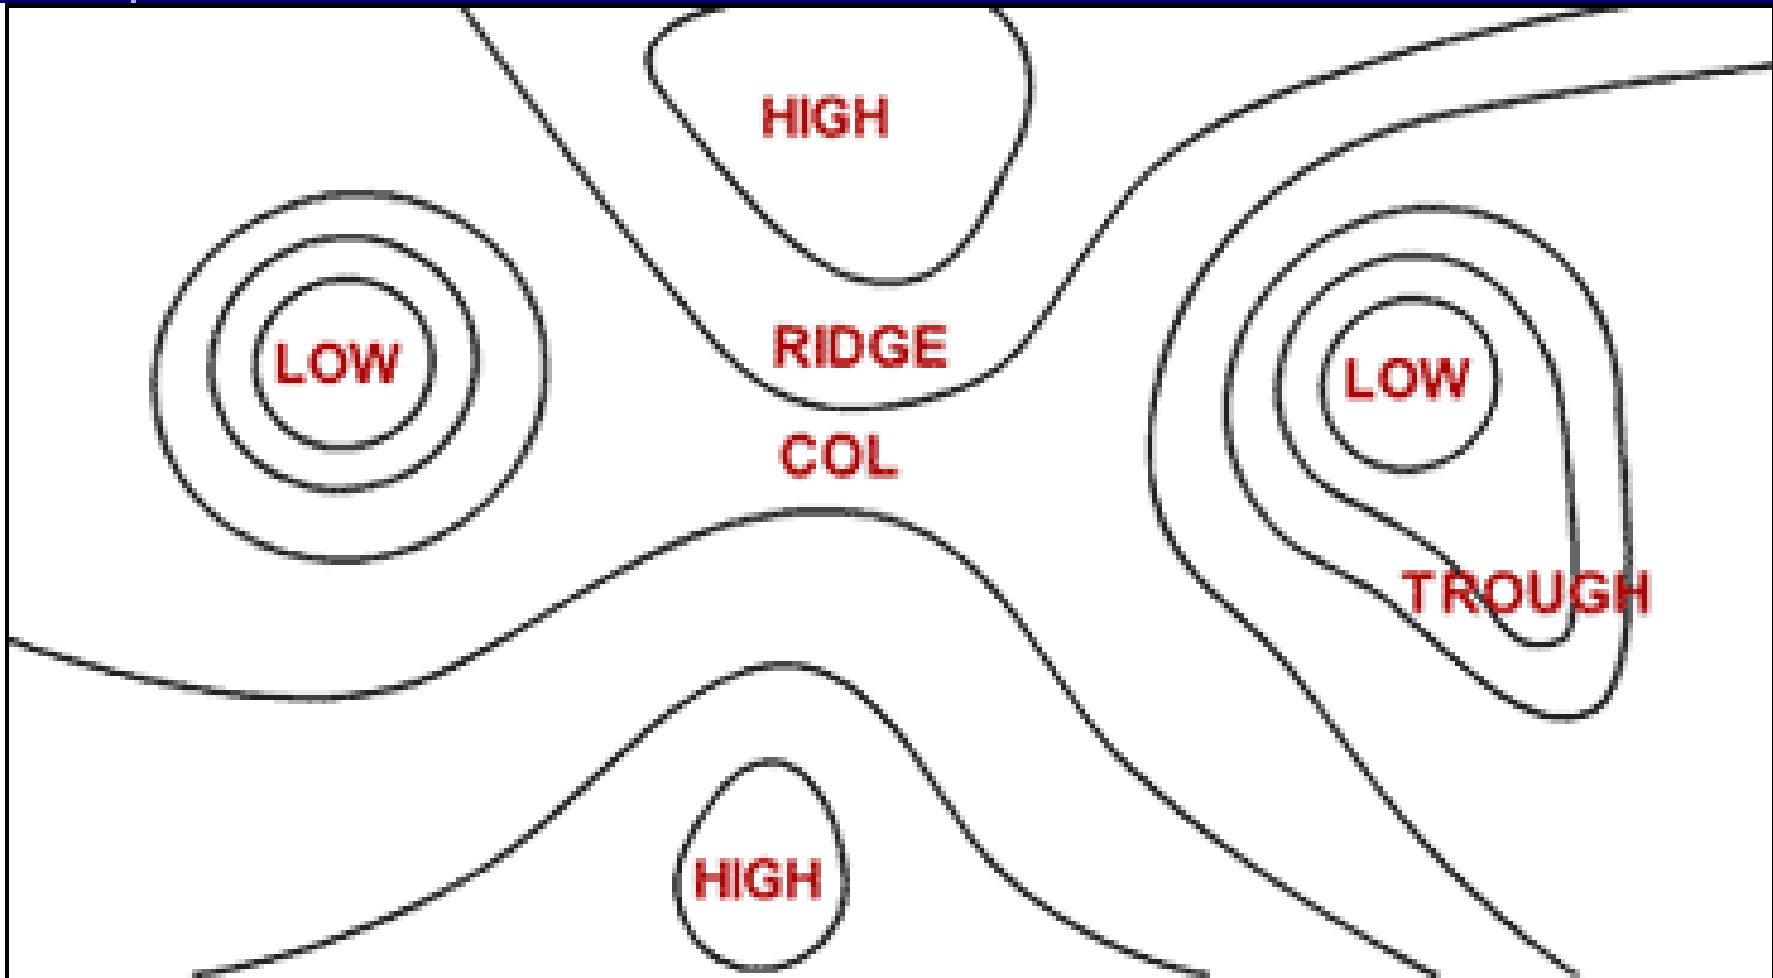

This looks like a perfect ridge of high pressure for the middle of next week. It should continue to produce epic faceting conditions. Bruce "T.G." Tremper says that this season's produced some of the best deep sugar skiing he's ever had.

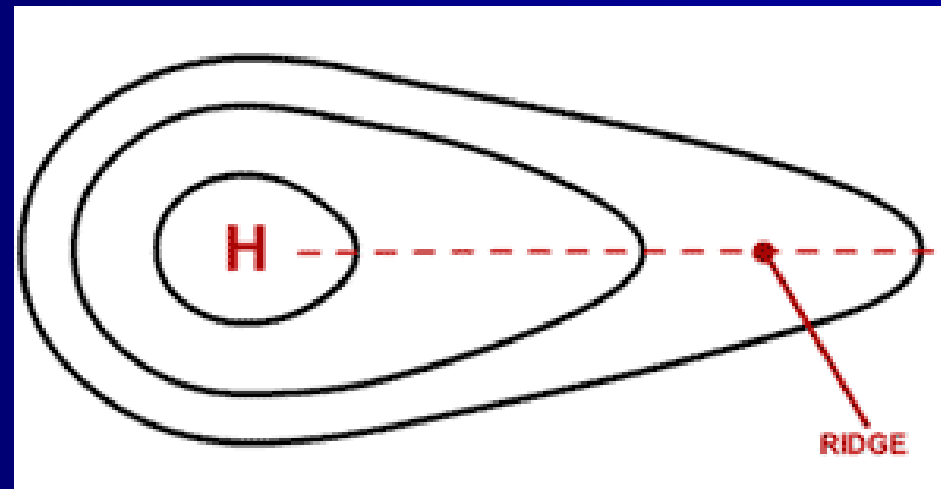

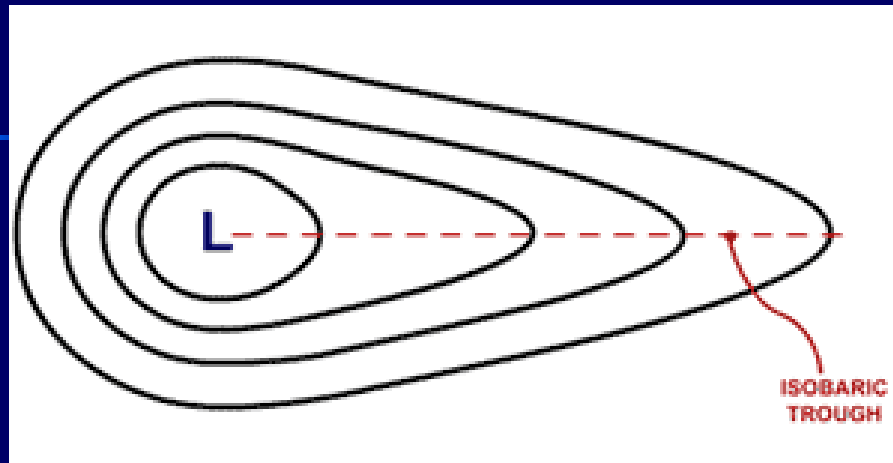

01/19/2007 06UTC 156HR FCST VALID THRU 01/25/2007 18UTC NCEP/NWS/NOAA

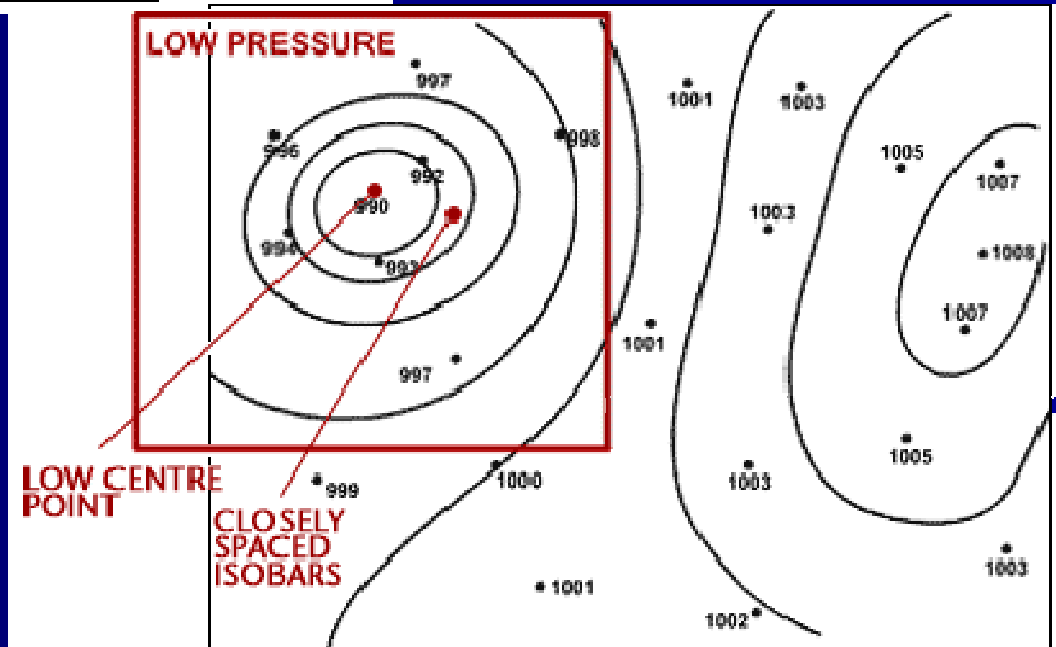

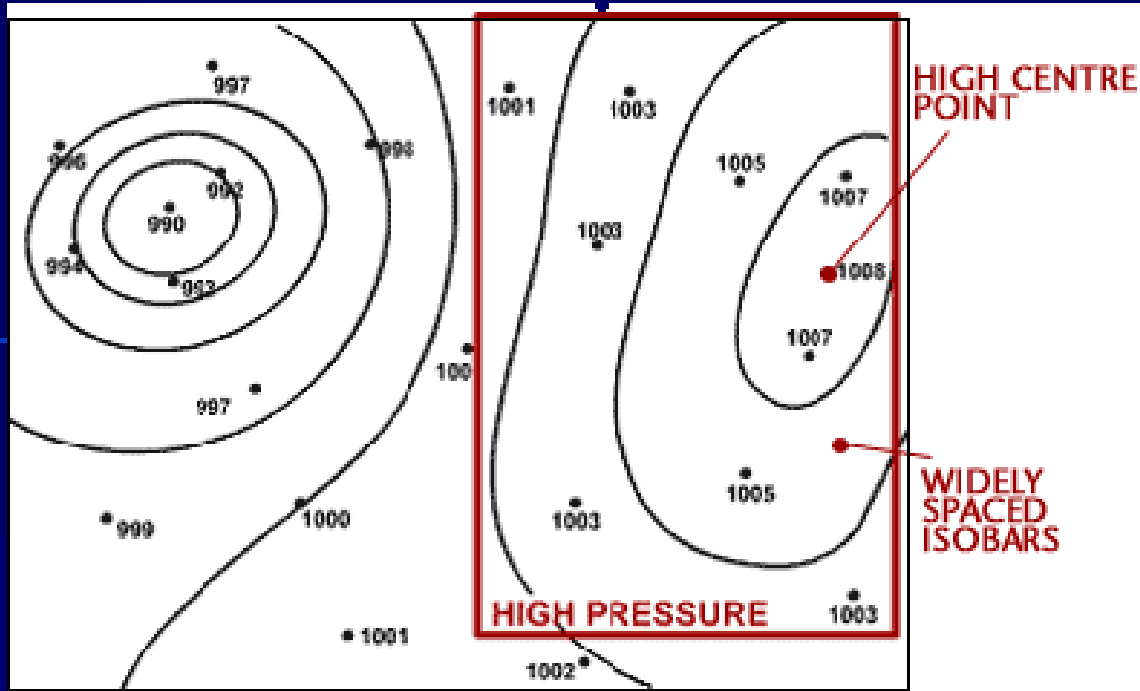

# Col

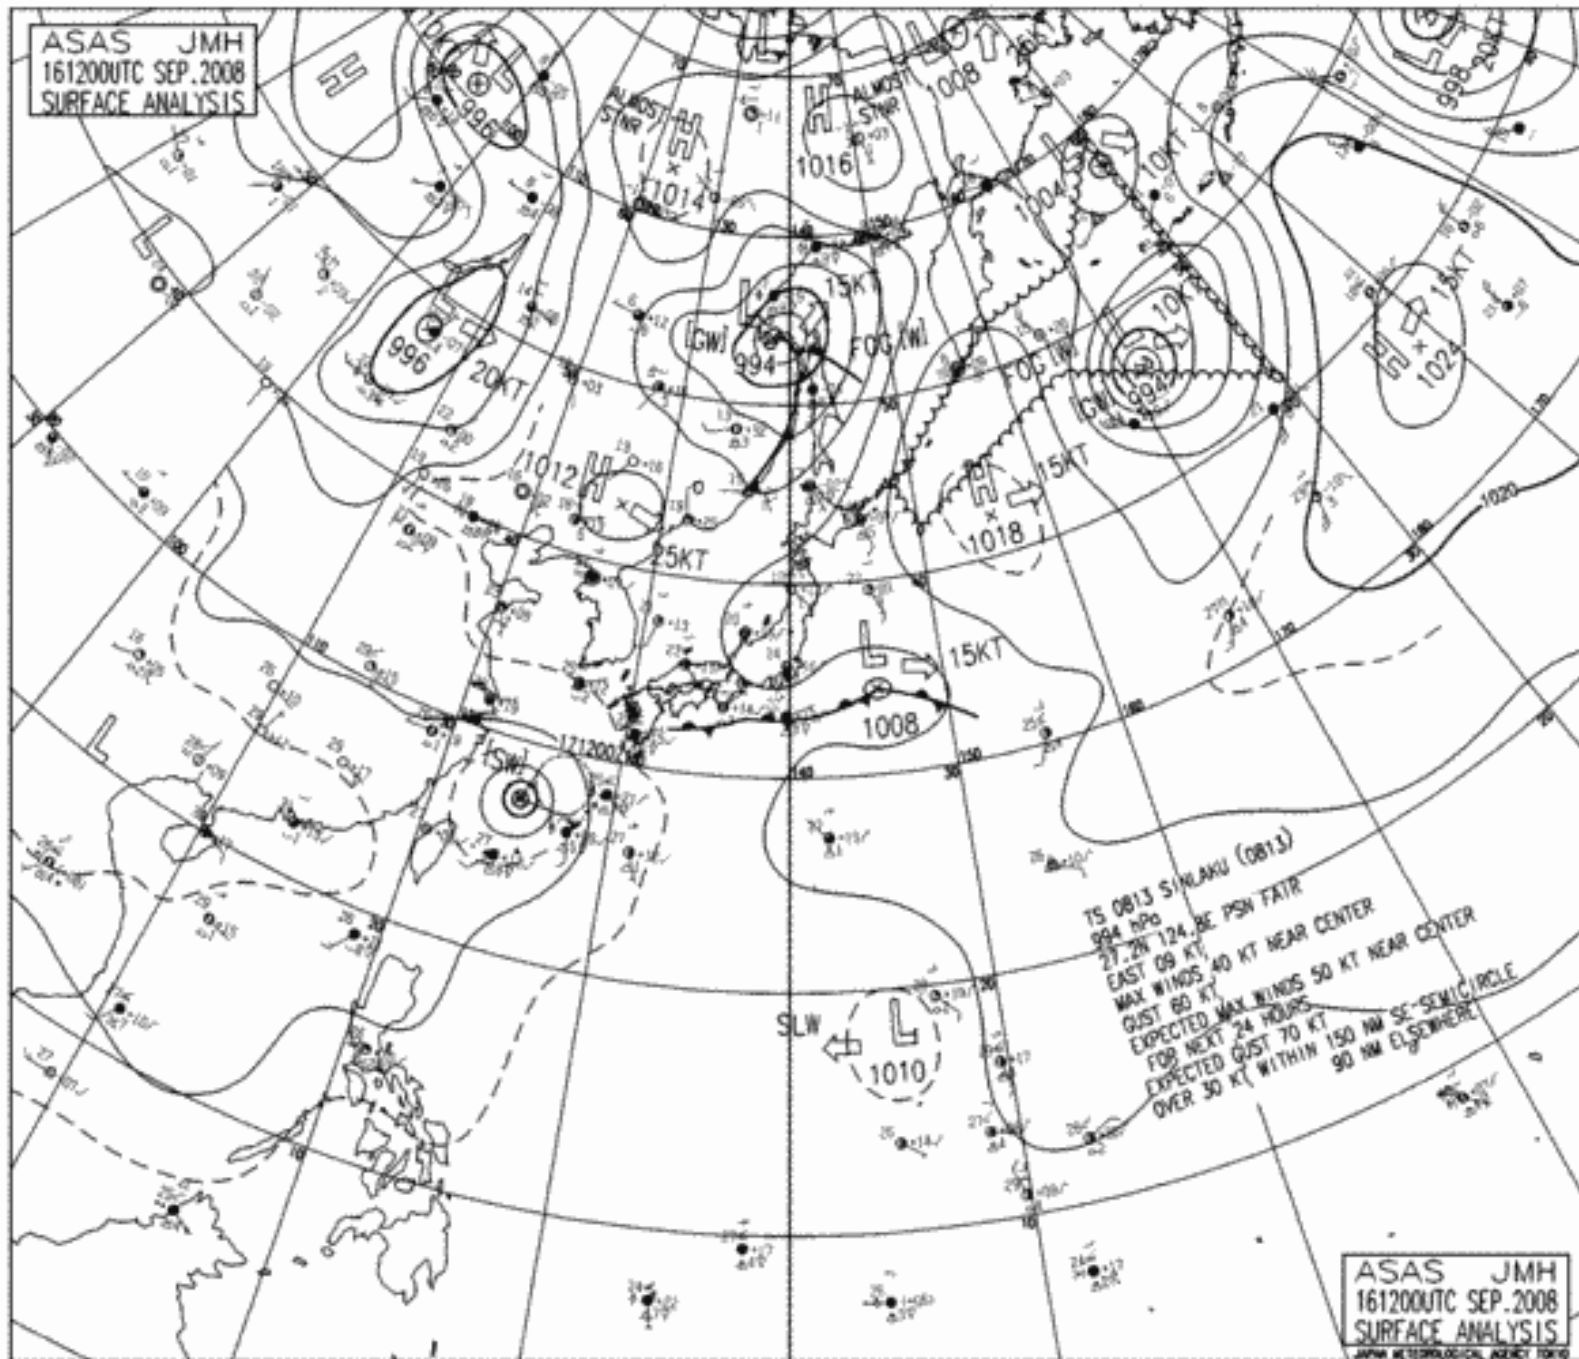

- col can be identified as an area of slack pressure between two anticyclones and two depressions.
